Unidentified Anomalous Phenomena. A briefing from Germany.

A dry, citation-first survey of the contemporary scientific record on UAP, kinematics, transients, biology, and history, written from the Federal Republic for an international, English-reading audience.

COMPILED Göteborg · 2026	DOMAIN Aerospace / Astro
METHODOLOGY Open literature	SCOPE DE · global

§ 00 / Abstract

CLASSIFICATION / OPEN

HIGHLIGHTS ON

What is meant by 'UAP', and why this briefing exists.

EN DE SV

The term *Unidentified Anomalous Phenomena* (UAP) replaces the historically loaded *UFO* in current government and scientific usage. Since 2017, declassifications by the **United States Department of Defense**, the establishment of the **All-domain Anomaly Resolution Office** (**AARO**) in 2022, and parallel parliamentary disclosures in France, Brazil and Japan have moved the topic from folklore into the remit of aerospace safety, atmospheric physics and astronomy.

Germany has historically kept a low public profile. The **Bundeswehr** maintains no dedicated UAP office; the **Bundestag** has confirmed (Drs. 19/15047, 20/3215) that no systematic collection program exists. This document collects the strongest scientific work internationally and places one of the earliest well-documented radar cases, the Magdeburg MW 18014 intercept of 14 January 1944, into that record.

> *"The data, taken as a whole, are inconsistent with current understanding of physics or human technology."*
>
> , Knuth, Powell & Reali, *Entropy*, 2019.

§ 01 / Kinematics CLASSIFICATION / OPEN

Knuth, Powell & Reali (2019): the Nimitz Tic-Tac, in numbers.

In November 2004, F/A-18F crews from USS *Nimitz* (CVN-68) engaged a smooth, ~14 m, wingless object off Baja California. The encounter was recorded on AN/APG-73 radar, FLIR ATFLIR pod, and AN/SPY-1 from USS *Princeton*. In 2019, physicists **Kevin H. Knuth** (SUNY Albany; formerly a research scientist at **NASA Ames Research Center**), **Robert M. Powell** and **Peter A. Reali** published a peer-reviewed kinematic reconstruction in *Entropy*.[1]

EN DE SV

From the Princeton tracks, descents from ~28 000 m to ~15 m *in under one second*, they derive lower bounds on acceleration (≥ 5 370 g), jerk and specific power. Translating those into propulsion requirements yields figures four to five orders of magnitude beyond any disclosed airframe. Critically, no sonic boom, no thermal exhaust, and no control surfaces were observed.

PEAK ACCELERATION

≥ 5 370 g

≈ 53 km/s² lower bound

SPECIFIC POWER

≥ 10^9 W/kg

Four orders > rocket SOTA

SONIC SIGNATURE

None

Mach > 1, no boom recorded

The paper does not claim extraterrestrial origin. It claims that the observed performance, if instrument data are accurate, lies outside the publicly known engineering envelope. This framing, physics first, hypothesis last, is the methodological standard this briefing adopts throughout.

TABLE 3, TRAVEL TIMES TO THE NEAREST STARS

A point easily missed in the public discussion of Knuth, Powell & Reali (2019) is **Table 3** of the paper. Applied to the lower-bound acceleration derived from the Princeton tracks, the relative travel time required to reach our nearest stellar neighbours, including the time experienced by an observer *left on Earth*, is on the order of `days, not years` for destinations such as Proxima Centauri (≈ 4.2 ly), Barnard's Star (≈ 6 ly) and Sirius (≈ 8.6 ly). At the kinematics actually measured off the *Nimitz*, interstellar travel is no longer the multi-generation problem assumed by chemical-rocket extrapolations; it is a days-scale mission profile.[1]

§ 02 / Astronomy CLASSIFICATION / OPEN

Beatriz Villarroel & VASCO: stars that vanish.

Beatriz Villarroel (Nordic Institute for Theoretical Physics, Stockholm; formerly affiliated with the **SETI Institute** in California) leads the *Vanishing & Appearing Sources during a Century of Observations* project (VASCO). Comparing the 1950s USNO Palomar plates with modern Pan-STARRS imaging, the team has catalogued thousands of point sources that appear in the historical plate but are absent in any subsequent survey to magnitude ~25. [2]

Particularly striking: a sub-population of *multiple* transients appearing within a single ~50-minute Palomar exposure, clustered in time and space, and concentrated in plates taken *before the launch of Sputnik (1957)*, i.e. before any human object could glint in low Earth orbit. Villarroel et al. (2021, 2022) discuss reflective debris hypotheses but find them statistically incomplete.

VASCO is not a UAP project in the popular sense. It is an astronomical anomaly survey whose statistics happen to bear on the question. That is precisely the kind of indirect, archival evidence German institutions (e.g. the AIP Potsdam plate archive) are well placed to contribute to.

INDEPENDENT REPLICATION, HAMBURG OBSERVATORY, MARCH 2026

The VASCO result is no longer a single-team finding. In a preprint posted to arXiv on 20 March 2026 (arXiv:2603.20407), a researcher at the **Space Telescope Science Institute** (STScI, Baltimore) reported an *independent* search for fast astronomical transients in digitised photographic plates from Hamburg Observatory (Hamburger Sternwarte, Bergedorf) taken between 1954 and 1957, a different telescope, different emulsion, different hemisphere coverage from Palomar. The analysis identified **35 luminous events** shorter than one second that cannot be accounted for by known astrophysical sources, cosmic-ray hits or plate defects, and whose statistics *match* the pre-Sputnik Palomar findings of Villarroel et al. (2020/2021). A separate, independent dataset reproducing the anomaly is the strongest constraint VASCO has had to date. [23]

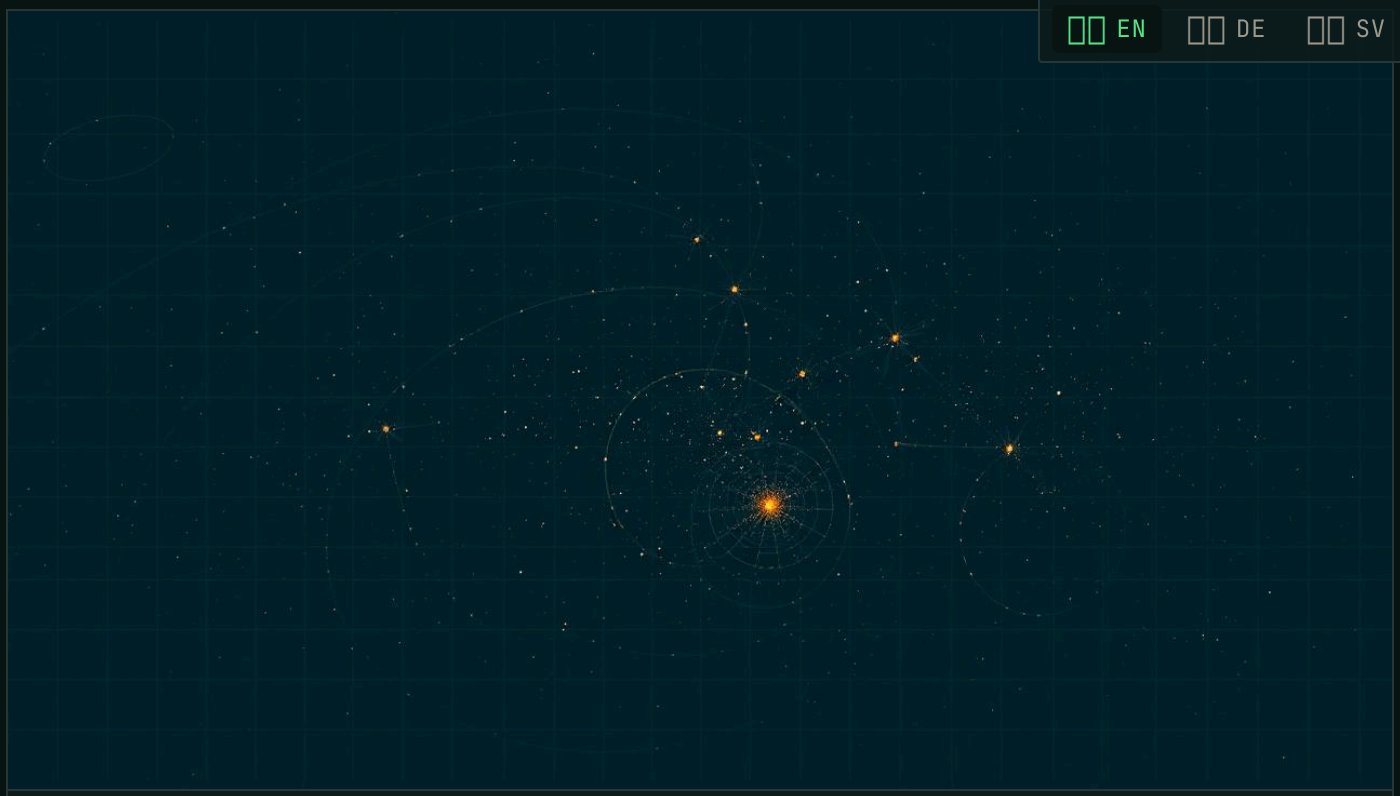

FIG. 02, SCHEMATIC OF MULTIPLE-TRANSIENT CLUSTERING, AFTER VILLARROEL ET AL. (2021).

BRUSSELS, 20 MARCH 2024, ASSESSMENT OF UAP

Villarroel was a featured speaker at the **European Parliament** day on the *Assessment of UAP* (20 March 2024), convened by MEP Francisco Guerreiro (Greens/EFA, Portugal). It is, to date, the most substantive UAP hearing held inside an EU institution.

Toward the end of her presentation Villarroel hesitantly showed a slide of the **European Crash Retrieval Initiative (ECRI)**, including **Christian Séance** and several other project members, that she had requested permission to display but had not, in fact, been formally cleared to show. That single slide was *removed* from at least one re-upload of the Parliament broadcast on YouTube for a period in 2025 (verified by the author); it has since reappeared in the main recording, while uncut copies remained available on mirror channels throughout. [22]

Garry Nolan: materials, isotopes, and the brain.

Garry P. Nolan, Rachford and Carlota A. Harris Professor of Pathology at Stanford University School of Medicine, is an unusually credentialed entry-point into this field. He holds **more than 50 issued US patents** in single-cell biology, immunology and cancer diagnostics, most consequentially as a co-developer of the CyTOF mass-cytometry platform, and has been the subject of repeated public reporting that his foundational work on intracellular signalling and single-cell proteomics is regarded as Nobel-calibre, with his name circulated in pre-Nobel discussions in physiology or medicine. He came to UAP-adjacent research only after being asked by elements of the U.S. Intelligence Community to evaluate tissue samples and recovered material from individuals reporting close-proximity events; the relevance of the patent record and the Nobel-tier reputation here is that the methodology brought to bear on that material is the same that built a 50-patent biotechnology career, not amateur ufology.[3]

Two strands of his published and presented work are scientifically load-bearing. First, mass-spectrometric analysis (ICP-MS, SIMS) of recovered material samples, including the so-called Council Bluffs (Iowa, 1977) slag and the Ubatuba (Brazil, 1957) magnesium fragments , showing isotopic ratios for magnesium (^{24}Mg / ^{25}Mg / ^{26}Mg) that deviate from the terrestrial standard in some specimens. The findings are contested; Nolan himself stresses replication.

Second, MRI work on a small cohort reporting acute neurological symptoms after alleged proximity events, identifying an unusually high incidence of basal-ganglia and putamen connectivity changes. The cohort is small and self-selected; the work is hypothesis-generating, not conclusive, a point Nolan has made repeatedly in lectures at Stanford and the Sol Foundation.

WARTIME RECORD | REICHSWETTERDIENST | ANOMALOUS TRAJECTORY

EN DE SV

MW 18014. A radiosonde balloon, to 36 km. Or, in the original log, to 176 km.

On 14 January 1944, at 03:00 GMT, the Reichswetterdienst released a meteorological radiosonde from Magdeburg (52.13° N, 11.62° E). The instrument transmitted on 13.5 MHz; the ground station logged temperature, pressure and tracked azimuth. In the post-war international tables the peak altitude is given as ~35–40 km, a record that was not formally broken until 1961.

The original Reichswetterdienst protocol, however, records a peak altitude of **176 km**, comfortably above the **100 km Kármán line** that conventionally defines the boundary of space. If correct, MW 18014 is the first man-made object credibly reported to have reached space, more than a year before the V-2 sounding flights of June 1944 and well before Sputnik (1957). The 176 km figure is what the encyclopaedic record (Wikipedia, with primary citations to the Reichswetterdienst documentation) actually preserves; the 35–40 km figure that propagated into the post-war meteorological literature appears to be a downward revision whose chain of custody is not transparent. See [9, 10].

MW 18014 is not, in its accepted reading, a UAP case. We include it because it illustrates a recurring pattern in the German archival record: **anomalous instrumented returns are silently revised toward the operationally expected value, and the original log survives only as a footnote.** The same dynamic, first detection inconvenient, second detection authoritative, recurs in the Bundeswehr and DFS material reviewed in §05. The German archives (DWD Offenbach, Bundesarchiv-Militärarchiv Freiburg) likely hold more.

§ 04A / Case Dossier — CLASSIFICATION / OPEN

Five recurrent cases: trace evidence, mass witness events, anomalous morphology.

The contemporary scientific literature on UAP is increasingly accompanied by a parallel literature on adjacent anomalies, physical traces, mass-witness encounters, and disputed biological remains , that any serious briefing must acknowledge, if only to delineate the boundary between what is evidentially robust and what remains contested. The five cases below recur in every credible international review (Sol Foundation, NPI, ICER) and are treated here on the same dry, citation-first basis as the rest of this document.

C-01 **2017-PRESENT** · NAZCA · CUSCO, PERU

The Tridactyls (Nazca / Maria specimens)

DISPUTED · ONGOING ANALYSIS

EN DE SV

Mummified, three-fingered humanoid bodies presented to the Mexican Congress in September 2023 by journalist Jaime Maussan. Independent C-14 dating (Instituto Nac… Antropología e Historia, Peru; UNAM Laboratorio de Espectrometría) places the specimens between 600 and 1,800 years before present. Subsequent CT and DNA analyses (Abraxas Biosystems; Universidad Autónoma de San Luis Potosí, 2024) report tissue and skeletal articulation atypical of post-mortem assembly, while Peruvian authorities maintain that at least some specimens are pre-Hispanic mortuary fabrications. The case is genuinely unresolved at the level of primary data, and is included here as a methodological reference, not an endorsement.

C-02 2003 · PUBLISHED 2018 · ATACAMA DESERT, CHILE

Ata, the Atacama humanoid (15 cm skeleton)

RESOLVED · HUMAN, SEVERE MUTATIONS

A 15-centimetre skeletonised body recovered near the abandoned mining town of La Noria in 2003. Initially proposed as a candidate non-human specimen, it was subjected to whole-genome sequencing at Stanford University by Garry Nolan and Atul Butte (Bhattacharya et al., Genome Research, 2018). Result: human, female, Chilean ancestry, with a constellation of de novo mutations in genes governing skeletal development (COL1A1, COL2A1, KMT2D, FLNB). The case is closed scientifically, and is cited here as an example of how a properly resourced genomic pipeline can resolve an anomalous-morphology claim definitively, the methodological standard the Tridactyl specimens have not yet met.

C-03 06.04.1966 · WESTALL, MELBOURNE, AUSTRALIA

The Westall mass sighting (~200 schoolchildren and staff)

UNRESOLVED · MULTI-WITNESS

At approximately 11:00 local time on 6 April 1966, students and teachers at Westall High School and Westall State School observed one or more silver, disc-shaped objects descend over the adjacent Grange Reserve, hover, and depart at high speed. Estimated witnesses: 200+. Ground traces (a circular flattened area) were photographed and removed by uniformed personnel within hours. RAAF and Department of Air files were declassified in stages between 2003 and 2014; no conventional aircraft, weather balloon, or military exercise has been matched to the event. Westall remains the largest unresolved mass-witness UAP case in the Southern Hemisphere.

C-04 16.09.1994 · ARIEL SCHOOL, RUWA, ZIMBABWE

Ariel School encounter (62 children, ages 6–12)

UNRESOLVED · CHILD-WITNESS CONSISTENCY

During morning recess at the Ariel School outside Harare, 62 children independently reported observing a silver craft and one or more humanoid figures at the edge of the schoolyard. Interviews were conducted within 48 hours by Cynthia Hind (MUFON Africa) and shortly thereafter by Dr John E. Mack (Harvard Medical School), recorded on video and preserved by the Dr John E. Mack Institute. The witness consistency, in particular regarding non-verbal communication of an environmental message, has been independently re-examined by Randall Nickerson's documentary Ariel Phenomenon (2022) with surviving witnesses now in their late thirties. No conventional explanation has been substantiated.

C-05 20.01.1996 · VARGINHA, MINAS GERAIS, BRAZIL

The Varginha incident (ESG · Brazilian Army involvement)

OFFICIALLY CONFIRMED MILITARY OPERATION; ENTITY CLAIM CONTESTED

Multiple civilian witnesses in the city of Varginha reported the recovery of one or more biological entities of unknown morphology by a joint Polícia Militar / Exército Brasileiro / Corpo de Bombeiros operation between 20 and 22 January 1996. A military fatality (Sgt. Marco Eli Chereze) occurred in the immediate aftermath. The Comando da Aeronáutica subsequently confirmed (parliamentary inquiry, 2010; FAB statement, 2020) that a coordinated operation took place on those dates, while declining to characterise its target. Varginha is unique among modern cases in being substantially documented in declassified Brazilian military files at the Arquivo Nacional.

The pattern across these five files is methodological, not metaphysical. Where the chain of custody is intact and the analytic pipeline modern (Atacama), the case resolves. Where the chain of custody is broken or contested (Tridactyls, Varginha entities), the case remains in dispute. Where the witnesses are numerous and contemporaneous and the physical environment is intact (Westall, Ruwa), the case persists as an unresolved anomaly that no conventional hypothesis has yet displaced.

§ 05 / Parlamentarische Anfrage CLASSIFICATION / OPEN

Berlin, 2007–2010: when Die Linke asked the question.

EN DE SV

Between 2007 and 2010, members of the parliamentary group **DIE LINKE** in the German **Bundestag** became the first and, to date, only faction to formally ask the Federal Government, on the public record, what it knew about UFOs and whether any German authority maintained a programme analogous to those then being discussed abroad.

The exchange unfolded across three *Kleine Anfragen* (Minor Interpellations) and one written question, principally driven by MdB **Raju Sharma** with support from the parliamentary group's leadership. The substantive trigger was the 2007 wave of European disclosure activity, the French **CNES**/**GEIPAN** public archive going online in March 2007, and the British **Ministry of Defence** beginning its rolling release of UFO files later the same year.

CHRONOLOGY · DEUTSCHER BUNDESTAG — 17. WAHLPERIODE

2007
Anfrage an die **Bundesregierung**

Initial written questions probing whether the **Bundeswehr**, BND or BMVg held any UFO/UAP file collection comparable to **GEIPAN** or the UK MoD's UFO desk.

12.10.2009
BT-Drucksache 17/116 ↗

Kleine Anfrage 'Erforschung von UFO-Phänomenen in Deutschland'. The Federal Government replied that no agency holds a dedicated programme; sightings reported to the **Bundeswehr** are treated as routine air-policing matters and not retained as a distinct dataset.

09.06.2010
BT-Drucksache 17/2025 ↗

Follow-up Kleine Anfrage on the Wissenschaftlicher Dienst report on UN Resolution A/RES/33/426, quietly produced for an MdB enquiry. The government confirmed the document's existence but declined to characterise it as policy.

21.11.2022
BT-Drucksache 20/3215 ↗

Most recent successor inquiry on UAP sightings in German airspace. The reply explicitly cites the 2009/2010 answers as standing precedent, the policy posture established u… 12… Bundestag has not been revised.

The substantive answer from the Federal Government, repeated across all three exchanges, was consistent: *Germany operates no UFO programme, holds no dedicated archive, and has no plans to establish one.* The **Bundeswehr** does not retain pilot reports of unidentified objects beyond their immediate operational significance; ATC anomalies handled by the **Deutsche Flugsicherung** are logged under generic incident codes.

The political significance of the 2007–2010 exchange is therefore not what it revealed, but what it established: a documented parliamentary record that the absence of a German UAP programme is a deliberate policy posture, not an oversight. Every subsequent enquiry, including BT-Drs. 19/15047 (2019) and 20/3215 (2022) , has received a near-identical answer, citing the 2009/2010 replies as precedent.

> *"Der **Bundesregierung** liegen keine eigenen Erkenntnisse über unidentifizierte Flugobjekte vor."*
>
> , Antwort der **Bundesregierung**, BT-Drs. 17/116, 12. Oktober 2009.

For an English-reading audience: this is the German negative space on the disclosure map. France investigates publicly, the US investigates statutorily, Brazil declassifies retroactively, Japan has issued protocol, and Germany, on the parliamentary record since 2007, has explicitly declined to do any of the above.

§ 06 / Disclosure Movements (or not so much movement) CLASSIFICATION / OPEN

A ten-nation comparison: BR · US · MX · PE · CL · JP · FR · UK · SE · DK.

Disclosure is not one process. It is a set of loosely coupled administrative reforms, military, scientific, parliamentary, each with its own legal vehicle and institutional culture. Latin America in

particular has the longest unbroken record of state-level openness on the subject. The summary below is current to early 2026.

EN DE SV

BR Brazil

FAB · COMAER

Operação Prato (1977) · Noite Oficial dos UFOs (1986)

The Brazilian Air Force operates the only continuously declassifying military UAP program in the Western Hemisphere. Files released to the Arquivo Nacional since 2008.

US United States

AARO · ODNI · NASA

AATIP (2007) · UAPTF (2020) · AARO (2022) · NASA UAP IST (2023)

Statutory mandate via NDAA FY2022/23 §1683. The NASA Independent Study Team report (Sep 2023) recommended a science-led, transparent data pipeline and the appointment of a Director of UAP Research.

MX Mexico

CÁMARA DE DIPUTADOS · SEDENA

Audiencias UAP (2023) · Tlaxcoaque hearings

Mexico held the first official congressional hearings on UAP outside the United States, in September and November 2023, convened by Deputy Sergio Gutiérrez Luna with testimony from Jaime Maussan, Ryan Graves and Avi Loeb. SEDENA radar archives have been partially declassified.

PE Peru

FAP · OIFAA

OIFAA (2001) · Chulec / Mercedes incidents

The Peruvian Air Force operates the **Oficina de Investigación de Fenómenos Aéreos Anómalos** (**OIFAA**), re-activated in 2001 under Cdr. Julio Vucetich. The 1980 Mariano [illegible] intercept (Lt. Huertas) remains a textbook case of military pursuit with public documentation.

JP Japan

MOD · [illegible]

Kōno Directive (2020)

Defense Minister Tarō Kōno issued formal SDF protocol for UAP encounters in September 2020, including reporting and photographic capture. Bipartisan parliamentary group formed 2024.

FR France

CNES · GEIPAN

GEPAN (1977) · SEPRA · **GEIPAN** (2005)

GEIPAN, hosted by the Centre National d'Études Spatiales in Toulouse, is the world's longest-running civilian UAP investigation office, with a fully public case database and ~3 % unexplained ('D') classification rate.

CL Chile

DGAC · CEFAA

CEFAA (1997, re-launched 2010)

The Comité de Estudios de Fenómenos Aéreos Anómalos sits inside the Dirección General de Aeronáutica Civil and is one of the very few state UAP offices with formal access to primary radar, ATC and military pilot reports. Public case files include the 2014 Chilean Navy helicopter IR footage analysed by CEFAA scientists.

UK United Kingdom

MOD · DI55 (DEFUNCT)

Rendlesham (1980) · MoD UAP desk closed 2009

The **Ministry of Defence** ran a dedicated UAP desk for decades; in December 2009 it was closed on the stated grounds that no report had ever revealed a defence threat. National Archives

released ~60,000 pages between 2008 and 2013, but no successor body exists and there is no current statutory mandate for collection or analysis.

EN DE SV

SE Sweden

FÖRSVARSMAKTEN · UAP SWEDEN (CIVIL)

Ghost rockets (1946) · Härnösand wave

Sweden has no state UAP office. The 1946 'spökraketer' over Norrbotten were investigated by the Defence Staff with U.S. and U.K. liaison and remain officially unexplained. Modern collection is carried by the civil association UAP Sweden; the Armed Forces have no published reporting protocol for pilots or air traffic controllers.

DK Denmark

FORSVARET · SUFOI (CIVIL)

FE archive release (2009) · drone crisis (Sep 2025)

The Danish Defence Intelligence Service (Forsvarets Efterretningstjeneste) released its UFO archive to the public in 2009. There is no standing state UAP office. The September 2025 airspace incursions over Copenhagen, Aalborg and other airports were framed by the government as hostile drones, but the official report has been postponed past the next general election and no physical evidence has been published (see [21]–[24]).

POSITION · DEUTSCHLAND

The Federal Republic has, to date, no analogue of **GEIPAN**, **AARO**, COMAER or **OIFAA**. Civilian collection is fragmented across Mutual UFO Network–Deutschland (MUFON-CES) and the GEP e.V. (Gesellschaft zur Erforschung des UFO-Phänomens). A pragmatic next step, matching France's 1977 model, would be a small **CNES**-style office at DLR Oberpfaffenhofen, mandated to receive **Bundeswehr** and Deutsche Flugsicherung anomaly reports under a published protocol.

For German-speaking audiences seeking a serious, source-literate voice on this material, **Georg Boch** is worth following: a long-time researcher and commentator on UAP, the US disclosure process and the scientific literature, who covers the same primary sources cited throughout this briefing (Knuth et al., Villarroel/VASCO, Nolan, the Grusch and Elizondo testimony) in German.

EN DE SV

§ 06A / Sworn Testimony CLASSIFICATION / OPEN

The U.S. Congress hearings (2023–2025): witnesses under oath, and 'Immaculate Constellation'.

The modern congressional cycle opened with a low-key hearing on 17 May 2022 in the House Intelligence Counterterrorism Subcommittee, at which Ronald Moultrie (USD-I&S) and Vice Admiral Scott Bray (ONI) testified. It was historic (the first public UAP hearing in Congress in over 50 years) but dismissive in tone and produced few substantive new disclosures. The U.S. House Committee on Oversight and Accountability subsequently convened three public hearings at which witnesses testified *under oath* (26 July 2023, 13 November 2024 and 9 September 2025), with the legal exposure to perjury that this entails (18 U.S.C. § 1621). For a German audience used to the **Bundestag**'s written-only *Kleine Anfragen* (§05), this is the procedural significance: these are not press interviews or podcast claims, they are sworn statements on the U.S. Congressional Record.

T-01 26 JUL 2023

David Charles Grusch

FORMER NRO / NGA OFFICER · FORMER CO-LEAD, UAP TASK FORCE

HOUSE OVERSIGHT · NATIONAL SECURITY SUBCOMM.

Testified under oath that the U.S. operates a multi-decade, cross-contractor program for the recovery and reverse-engineering of "non-human" craft, and that biological remains of "non-human" pilots have been recovered. Filed as a protected whistleblower under PPD-19 and the ICWPA via the Intelligence Community Inspector General (ICIG), who deemed his complaint "credible and urgent".

RAdm. Tim Gallaudet (USN, ret.) & Michael Gold

FORMER NOAA ADMINISTRATOR · FORMER NASA UAP PANEL

HOUSE OVERSIGHT · CYBERSECURITY SUBCOMM.

Testified to the existence of the 'Go Fast' video (Gallaudet, originally classified) and to the institutional stigma blocking scientific reporting (Gold). Both under oath.

T-06 NOV 2024

Dylan Borland

FORMER USAF AIRMAN

AFFIDAVIT · TELEVISED ON-RECORD TESTIMONY

Filed a sworn affidavit and went on-record alleging direct first-hand involvement in a USAP-level recovery operation involving non-human craft. Among the youngest named [illegible] claims at this classification level. See [17].

CODENAME · IMMACULATE CONSTELLATION — DISCLOSED 13 NOV 2024

An alleged unacknowledged Special Access Program for UAP, withheld from Congressional oversight.

In his written and oral congressional testimony of 13 November 2024, journalist Michael Shellenberger disclosed a multi-page unclassified summary, sourced from inside the U.S. Intelligence Community, describing a program codenamed **IMMACULATE CONSTELLATION**: an alleged centralised, all-source repository for UAP imagery, sensor returns and incident reporting, operated as an unacknowledged Special Access Program (USAP) and reportedly *not* notified to the relevant Congressional oversight committees [16].

In May 2025, the original source went public. **Matthew Brown**, a former **Department of Defense** metadata analyst, confirmed in a three-hour, on-camera interview with **Jeremy Corbell** and **George Knapp** on *Weaponized* (Episode 76, 9–13 May 2025) that he is the author of the document Shellenberger placed into the Congressional Record. Brown describes encountering the IMMACULATE CONSTELLATION briefing on the **Pentagon**'s classified network on a server it had no business being on, reporting it through the chain of command, being instructed to delete the material, and choosing instead to deliver an unclassified summary to a sitting member of Congress. He has stated, on the record, that the underlying repository contains imagery consistent with structured craft of non-human origin, including satellite imagery of a "football-field-sized" object. Brown's on-the-record identification converts what was previously a single-source secondary disclosure into a named, first-person whistleblower claim now tied to the same congressional record [16, 21].

Read alongside Grusch's 2023 ICIG-validated whistleblower complaint and Elizondo's 2024 testimony on legacy DoD programs, the disclosure forms a coherent procedural claim: that a real chain of custody for UAP material and intelligence exists inside the U.S. government, but is structurally insulated from the constitutional oversight mechanism. Whether the underlying substantive claims are true is, of course, separate, but the *procedural* claim is now part of the U.S. Congressional Record [14, 15].

The German read-out is narrow. None of these witnesses has testified before the **Bundestag**, and none of the underlying documents are accessible to the **Wissenschaftliche Dienste** under

German **FOI** (IFG). But the existence of *sworn* U.S. Congressional testimony at this level, independent of media interpretation, is the single strongest argument in 2 [illegible] the structured German reporting office proposed in §05: not because Grusch, Elizondo, Shellenberger or Borland are necessarily correct, but because their testimony has crossed a procedural threshold (perjury exposure, ICIG validation) that mere press coverage never can.

EN DE SV

§ 06B / Personnel Attrition — CLASSIFICATION / OPEN

The 2023–2026 cluster: dead and missing scientists in US and Chinese frontier programs.

A separate, but procedurally adjacent, anomaly has surfaced in the open record between July **2023** and April **2026**: an unusual cluster of *deaths and disappearances* among scientists with active clearances in space, nuclear, hypersonic, military-AI and adjacent frontier programs, on *both* sides of the US-China competition. The phenomenon is not, in itself, evidence of UAP-related causation. It is included in this briefing because it intersects directly with the same institutions named in §06A (**NASA** / **JPL**, **Wright-Patterson AFB**, **Los Alamos**, the U.S. nuclear weapons complex), and because the **White House** has, as of April **2026**, publicly acknowledged the cluster and signalled a federal investigation [18, 20].

A-US — JUL **2023** – FEB **2026**

United States · 10–11 cases

NASA JPL · LOS ALAMOS · MIT · CALTECH · USAF

Per The Hill / TV4: a 59-yr-old **NASA JPL** physicist (DART project) dies July **2023**, cause undetermined. A second **JPL** space scientist dies July **2024**. A former **Los Alamos** employee vanishes on foot, May **2025**. A 60-something **JPL** aerospace engineer with **Wright-Patterson AFB** ties disappears mid-hike in Angeles National Forest, June **2025** (body never found). A 53-yr-old **Los Alamos** administrative staffer last seen walking along a highway, June **2025**. An aug-**2025** disappearance at the **Kansas City National Security Campus** (non-nuclear weapons

components, top-tier clearance). A 47-yr-old **MIT** nuclear physicist shot dead at home, Dec 2025. A 67-yr-old **Caltech** astrophysicist (**NASA** collaborator on extraterrestrial w… …ds port), Feb 2026. A retired **USAF** general with reported ties to UFO programs and to **Wright-Patterson** disappears Feb 2026.

A-CN

2018 – APR 2026

People's Republic of China · ≥ 9 cases

HYPERSONICS · MILITARY AI · DRONES · SPACE DEFENCE

Per Newsweek / South China Morning Post / Lianhe Zaobao: Feng (Beijing, AI Taiwan-scenario simulations, dies at 02:35 leaving a meeting, buried at Babaoshan); Zhang Xiaoxin (62, **National Satellite Meteorological Centre**, car crash Dec 2024); Chen Shuming (57, defence-grade chip R&D lead, car crash 2018); Zhou Guangyuan (51, polymers / CAS, Dec 2023, no cause given); Fang Daining (68, super-strong spacecraft materials, BIT, Feb 2026, sudden episode in South Africa); Yan Hong (56, hypersonics, ex-Wright State / NWPU, Mar 2026); Zhang Daibing (47, top drone expert, **NUDT** Unmanned Systems); Liu Donghao (51, data-security pioneer, 2024); Li Minyong (49, biomedical chemist, sudden illness Nov 2025).

UAP-ADJACENT · **WRIGHT-PATTERSON** CLUSTER — FEB 2026

Two of the ten US cases share a **Wright-Patterson AFB** connection.

Per The Hill (cited in TV4 [18]): the **JPL** aerospace engineer who disappeared mid-hike in June 2025 and the retired **USAF** general who disappeared in February 2026 both have documented professional ties to **Wright-Patterson Air Force Base** in Ohio, the installation around which decades of public speculation has centred regarding the alleged storage of recovered material from the 1947 Roswell incident, and which recurs in the witness testimony reviewed in §06A. The retired general's reported involvement in "UFO programs" was explicitly cited as the basis for public speculation about his disappearance.

No causal connection has been established. We note only that two of ten US cases independently surface the same installation named, separately, by Grusch (T-01) and Elizondo (T-03) under sworn congressional testimony.

The Chinese parallel, documented by Newsweek [19], makes the asymmetry-attack hypothesis difficult to sustain in either direction. A senior Western military analyst, quoted on condition of anonymity ("I don't think it's good for your health to be associated with this kind of thing"),

summarised the pattern: *the clusters are concentrated in hypersonics, military AI, swarming and space defence, disproportionately, the fields most likely to deliver decisi[illegible] ry advantage in the next decade.* The same analyst conceded that some cases will turn out to be "complete accidents," but described the cumulative pattern as "starting to look more and more unusual."

For a German audience the takeaway is, again, procedural. Whatever the explanation, coincidence, foreign-state operations, internal suppression, or something stranger, the cluster demonstrates that the institutions named in §06A (**NASA**, DOE, **USAF**) are not in stable equilibrium. The Federal Republic, which maintains close scientific and industrial ties to **NASA** (DLR Köln-Porz, ESA), to the US national-laboratory system, and to **Wright-Patterson** via the USAFE structure referenced in §07A, has a direct interest in the resolution of this investigation.

§ 07 / Civilian Pathway

CLASSIFICATION / OPEN

The Swedish model: when the state stays silent, citizens build the institution.

Sweden, like Germany, has no government UAP office. Unlike Germany, it has produced over the past decade the most coherent *civilian* disclosure ecosystem in Europe, academically credible, media-fluent, and tightly networked with the international movement. For a German audience asking "what would a non-state path look like?", Sweden is the working prototype.

STATE SILENCE · **RIKSDAGEN**

The contrast with the civilian effort is sharpened by a single procedural fact: the topic of UAP has, to date, **never once been raised publicly in the Riksdagen**, no interpellation, no written question, no committee hearing, no plenary statement on the record. Despite the September 2025 Kastrup–Gardermoen–Arlanda airport closures, the Luleå archipelago sightings, the Danish *droneredegørelse* still pending, and the U.S. congressional disclosure track now four years old, the Swedish parliament has not formally acknowledged the subject. The entire national conversation lives in civilian institutions and in a handful of broadcast outlets, by default, not by design.

EN DE SV

Beatriz Villarroel

ASTROPHYSICIST · NORDITA

Principal investigator of VASCO. Anchors the Swedish effort in peer-reviewed astronomy and provides the scientific spine.

E. Thomas Persson

FORMER HOMICIDE DETECTIVE · PODCAST HOST

Brings investigative methodology, chain of custody, witness interview protocol, to UAP case work. One of Sweden's most rigorous public ufologists.

Emil Marczak

RESEARCHER · UAP SWEDEN

Operational driver behind UAP Sweden's case database and public outreach.

Agneta Sjödin

BROADCASTER · PUBLIC COMMUNICATOR

Long-form Swedish television and podcast presence; gives the topic mainstream cultural reach without sensationalism.

These individuals operate across three interlocking organisations: **UAP Sweden**, the **European Crash Retrieval Initiative (ECRI)**, and **Citizens for Disclosure Sweden**. The last was founded by **Christian Séance**, who now also works for attorney Daniel P. Sheehan's **New Paradigm Institute** in the United States, providing a direct legal and policy bridge between the Scandinavian civilian movement and the US legislative track.

ORIGIN · RECURSIVE NOTE — Q1 2026

The name of this briefing is not coincidental.

In early 2026, Christian Séance founded the Facebook group **Deutschland UAP** as the German-language node of the Citizens for Disclosure network. The group is the first attempt to import the Swedish civilian model, investigative rigour, peer-reviewed science, mainstream media literacy,

transatlantic legal coordination, into the German-speaking public sphere. This document operates downstream of, and in dialogue with, that initiative.

EN DE SV

The Swedish lesson, transposable to Germany: in the absence of a state programme, a credible civilian institution requires four components, a working scientist (Villarroel / a German equivalent at MPI or DLR), an investigator with documentary discipline, a communicator who can hold mainstream attention without overclaim, and a legal-political conduit to parliament and to international peers. Each of the four is identifiable in the Swedish case. The German equivalents are not yet.

§ 07A / Airspace — CLASSIFICATION / OPEN

The mysterious drone wave of the 2020s, and what Germany cannot ignore.

Any honest 2026 briefing on UAP must address the global wave of unidentified drone incursions that escalated sharply between 2023 and 2025. The pattern is consistent across continents: silent objects, 1–6 metres (occasionally up to ~10 m), hovering for hours without visible propulsion or detectable signal, evading radar and jamming, vanishing on approach, and clustering near military installations and civilian airports. The phenomenon is documented, but unattributed.

D-01 DEC 2023

17-night swarm over F-22 base

LANGLEY AFB · VIRGINIA, USA

Dozens of unidentified drones over a base hosting F-22 Raptors. Restricted airspace ignored; countermeasures ineffective; aircraft relocated. Part of >600 reported incursions over US military bases during the 2020s.

EN DE SV

D-02

East Coast cluster wave

NEW JERSEY / PICATINNY ARSENAL, USA

Glowing clusters hovering silently or maneuvering without visible propulsion. >5,000 public tips. Aviation restrictions near Stewart Airfield.

D-03 LATE 2024

Incursions over US base on German soil

RAMSTEIN AIR BASE · RHEINLAND-PFALZ, DE

Part of the late-2024 internationalisation of the wave. **Ramstein**, the largest **US Air Force** installation in Europe, was among the locations affected. The **Bundesregierung** has not publicly characterised the objects.

D-04 SEP 2025

European airport closure wave

KASTRUP (DK) · GARDERMOEN (NO) · ARLANDA (SE)

Ball-shaped, glowing objects forced multi-hour closures of three Nordic capital airports in the same week. Major Karsten Marrup (**Danish Defence Academy**): "There is a risk that these were not drones at all."

D-05 OCT 2025

50–100 luminous objects over open sea

LULEÅ ARCHIPELAGO / GULF OF BOTHNIA, SE

Professional fishermen reported ball-shaped blue/white objects switching lights on and off, behaviours "not matching ordinary drones." Proximity to the Russian border and military zones politicised the case.

D-06 FROM SEP 2024

Symmetrical Russian airport closures

MOSCOW (DOMODEDOVO, VNUKOVO, SHEREMETYEVO, ZHUKOVSKY), RU

Largely unreported in Western media. Independent footage describes irregular, high-endurance, signal-less objects matching Western descriptions. The symmetry undermines a purely geopolitical reading.

STATUS · DENMARK

EN DE SV

The Danish drone report, promised, postponed, and still pending after the election cycle.

On 25 September 2025, Prime Minister **Mette Frederiksen** addressed the nation from the Statsministeriet and described the airspace incursions over Kastrup, Aalborg and several other Danish locations as an attack involving drones. The Forsvarsministeriet, under Defence Minister **Troels Lund Poulsen**, promised the Folketinget's defence-policy circle a written evaluation, the *droneredegørelse*, establishing whether hostile drones in fact violated Danish airspace, who operated them, and how the response was coordinated across Rigspolitiet, PET, FE and Forsvaret.

The report was due to land with the defence circle in late February 2026. On the same day a snap general election was called, the Forsvarsministeriet notified the parties that the evaluation was *not yet finished* and would be postponed until after the vote. Eight opposition parties , every party outside the SVM government except De Radikale , sent a joint letter demanding the redegørelse be released before election day. The minister refused, calling the premise of the demand "false." The Social Liberal MP Kristian Hegaard described the timing as something that *"smells from a long way off."*

The election has now passed. As of late April 2026 the redegørelse has **still not been made public**, and Berlingske reports that the wider European drone panic that began in Danish airspace is collapsing into a recurring pattern: *"land efter land må opgive at finde beviser"* , country after country has had to give up on finding evidence. Six months after the PM's speech, no physical fragment, no radar trace, and no captured signal has been published. The official position remains that Denmark was attacked; the evidentiary record remains classified or absent.

REFS: FRIHEDSBREVET · DR NYHEDER · TV2 NORD · BERLINGSKE / RITZAU · TV2 POLITIK · B.T.

For a German audience the relevant facts are narrow but uncomfortable. **Ramstein Air Base**, sovereign German territory hosting the headquarters of US Air Forces in Europe, has been among the locations affected by the late-**2024** internationalisation of the wave. The **Bundesregierung** has so far declined to publicly characterise the incidents, mirroring the institutional pattern documented in §05.

The conventional hypotheses, Russian hybrid warfare, classified **NATO** prototype tests, mass misidentification, each fail at least one falsification check. *Hybrid warfare* cannot account for the symmetrical Russian airport closures (D-06) without retaliation from either side. *Prototype testing* over populated civilian airports violates every known operational protocol of the actors

involved. *Misidentification* cannot explain hours-long endurance without recharge, radar-evading clusters, or sudden disappearance under direct observation. What remains, even if unproven nor refuted, is the possibility that a non-trivial subset of these incursions belongs to the same anomalous category as the cases documented in §01–§04.

SOURCE · CIVILIAN ANALYSIS — JAN 2026

"If this is not about conventional drones, geopolitical intrigues, or our own tests, what remains as an explanation?"

The most rigorous open-source mapping of the 2020s wave to date is *The Mystical Unidentified Drones of the 2020s* by **Christian Séance** (national coordinator, Citizens for Disclosure Sweden / New Paradigm Institute), published January 2026. It catalogues the institutional contradictions, the symmetric east/west pattern, and the political "Freudian slips", including statements by Trump, Burlison, Burchett and Hawley, that point to either withheld knowledge or genuine confusion at the highest level of the US chain of command. See [13].

HYPOTHESIS 6 · NON-MATERIALIST — APR 2026

The drones as a perceptual artefact: self-rendering, strange loops, and a "Project Blue Beam in miniature".

In an April 2026 addendum [14], Christian Séance proposes a sixth, explicitly *non-materialist* hypothesis that complements (rather than replaces) the five reviewed above. It builds on three convergent strands:

> **Hofstadter (1979)** , consciousness as a *strange loop*: a self-referential, recursive structure in which a system observes and creates itself. The "I" is the loop, not a substance behind it. [GEB · Pulitzer 1980]

> **Self-Simulation Hypothesis** (Irwin et al. 2020), reframed as *self-rendering*: not a simulation run on an external substrate (which would only push the question one level down, "turtles all the way down"), but a direct, substrate-free rendering process, analogous to a VR display where the image *is* the reality for the one experiencing it (cf. Hoffman 2025). [SSH · 2020]

> **Strømme (2025)**, Uppsala University, in *AIP Advances*: "Universal consciousness as foundational field", time, space and matter are *secondary representations* within a primary field of consciousness; individual minds are local rendering points. [AIP Adv. · 2025 · [15]]

On this view, the most certain statement is not Descartes' *cogito ergo sum* (which already smuggles in a subject and an object) but the more minimal axiom: *something is [illegible] rienced. The* experience itself is the rendering process, and the apparent split between observer and observed is generated *within* the loop.

Applied to the drone wave, the hypothesis is concrete: a non-trivial subset of the incursions may not be physical objects at all in the conventional sense, but *perceptual events* , signals injected, by internal cognitive mechanism or by external technology, directly into the rendering process of consciousness. This would account for the otherwise difficult cluster of properties: silent multi-hour hovers, evasion of radar and IR, sudden disappearance on approach, and the inability of the NRO, NGA and NORAD to track origin or destination.

> *"A magic trick. À la 'Project Blue Beam' in miniature scale. Direct transmission through our senses into the world."*
>
> , CHRISTIAN SÉANCE, GÖTEBORG, 12 APRIL 2026

For a German scientific audience this is, of course, the most difficult hypothesis to test, but it is also the only one that converges with the broader philosophical and physical literature on the hard problem of consciousness (Chalmers 1995). It is included here not as endorsement, but because the §05 / §07A briefing must record what the international civilian disclosure movement is actually arguing in 2026, and the non-materialist reading is, demonstrably, part of that record.

The German question is therefore not whether the drone wave exists, it is documented in DFS NOTAMs, **Bundeswehr** operational logs, and Polizei incident reports, but whether the Federal Republic intends to maintain the same reactive, attribution-free posture into 2026, while peer democracies (US, JP, FR, MX, PE) move toward structured reporting offices.
